

# SpaceAero Webinar

January 2026

# Agenda

1 DECADE-X: The project

2 SME Overcoming Challenges

3 DECADE-X Environment Demo

4 Use Cases

5 Next Steps & Call to Action

# DECADE-X team visits you today

Laurent Murris  
*Deployment Lead*

Ghislain De Roeck  
*SME Deployment Sponsor*

Jose M Blanco  
*SME Deployment Lead*

Léa Fiorio  
*SME Deployment Support*

Tony Acar  
*Product Management*

And the special intervention of

Alexandre Leroy  
*Liebherr  
Procurement  
Director*

Thibaut Bugaj  
*Lauak Supply  
Chain Director*

# Agenda

1

**DECADE-X: The project**

2

**SME Overcoming Challenges**

3

**DECADE-X Environment Demo**

4

**Use Cases**

5

**Next Steps & Call to Action**

# Actual Challenges and needs

Multi-tier visibility and collaboration to mitigate risk and prevent disruption in the Supply Chain

Export regulation to face an unstable geopolitical context

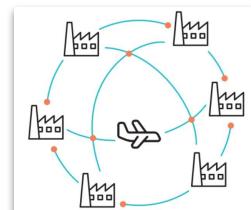

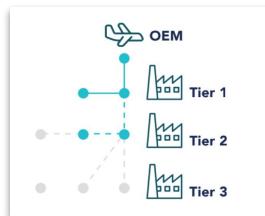

Prepare supply chain for new development with **seamless collaboration**

Need to **comply with data exchange regulation** focusing on data sovereignty especially in Europe

## Our vision

Build together the **Aerospace & Defence digital ecosystem** between aerospace manufacturers, OEMs and SMEs (around 10 000 actors) for multi-tier collaboration to strengthen our supply chain through digital sovereign continuity.

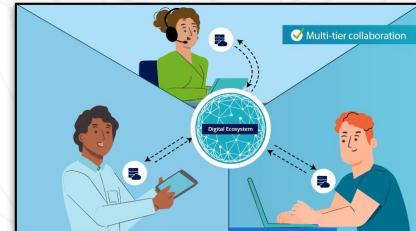

From current discontinued digital supply chain landscape...

...to new end-to-end Ecosystem with partners

## Business Values

### 4 key differentiating principles:

- **Trust:** protecting data **sovereignty**
- **Interoperability** based on **standards**
- **Multi-tier collaboration**
- **SME adoption**

Ensure **TRUST** based on **Gaia-X** principles:  
A European initiative to develop federated secure data infrastructure with **trust framework & sovereign control over data**

# Journey towards decentralized digital ecosystem, enabling a deeper collaboration throughout a highly interconnected supply chain

# Roadmap: Strategic Milestones 2025-2027

*Unlock the strength of a trusted collaborative supply chain through scalable innovation !*

# SME Value Proposition

*Addressing SME challenges is critical to achieving success of DECADE X*

## TODAY

-  Build the future solution
-  Influence use case standards and solutions to ensure your needs are well reflected
-  Benefits from being an early user of a use case
-  *No fees until 2028 for the first 100 suppliers.*

## TOMORROW

-  Simplify operation through standardised data exchange within the industry. (e.g : ease reporting, facilitate data collection)
-  Control data usage and storage through access management (volume and duration)
-  Market access to future digital supply chain ecosystem

# Agenda

Next Steps & Call to Action

# SME Overcoming Challenges & Pain points

*Addressing SME challenges is critical to achieving success of DECADE X*

We will cover these barriers from **different perspective** :

## ENTRY BARRIERS FOR SME

### TECHNICAL OPERATIONAL

- High investment costs, ROI
- Lack of internal skills
- Time constraints
- Resistance to change

### CYBERSECURITY TRUST

- Reluctance to open IT systems
- Fear of data and know-how usage
- Insecure transfer methods
- Lack of a security cloud platform

### INTEROPERABILITY INTEGRATION

- Incompatible software or IS
- Absence of a single data standard
- Heterogeneous data formats
- Unstructured information

### PROCESSES METHODOLOGIES

- Lack of client-supplier integration
- Unstructured technical data
- Absence of tools for data package
- Lack of data maturity management

# "Which of these challenges is most critical for your business right now?"

## TECHNICAL OPERATIONAL

- High investment costs, ROI
- Lack of internal skills
- Time constraints
- Resistance to change

## CYBERSECURITY TRUST

- Reluctance to open IT systems
- Fear of data and know-how usage
- Insecure transfer methods
- Lack of a security cloud platform

## INTEROPERABILITY INTEGRATION

- Incompatible software or IS
- Absence of a single data standard
- Heterogeneous data formats
- Unstructured information

## PROCESSES METHODOLOGIES

- Lack of client-supplier integration
- Unstructured technical data
- Absence of tools for data package
- Lack of data maturity management

## What's Your Top Challenge?

Head over to the Q&A in the Webinar Gmeet and let us know what's most important to you with an   you can also  or  

### Polls

Get a quick pulse of the audience

### Q&A

Give everyone an easy way to ask questions

1 

Technical & Operational is most critical for my business

# "Which of these challenges is most critical for your business right now?"

## TECHNICAL OPERATIONAL

- High investment costs, ROI
- Lack of internal skills
- Time constraints
- Resistance to change

## CYBERSECURITY TRUST

- Reluctance to open IT systems
- Fear of data and know-how usage
- Insecure transfer methods
- Lack of a security cloud platform

# Version 0 - Lessons Learnt from LIEBHERR & LAUAK

*Deployment of Product Conformity between tiers.*

Raw material manufacturer  
(B)

Raw material distributor  
(A)

Part manufacturer  
(Lauak)

Equipment manufacturer  
(Liebherr)

Aircraft manufacturer  
(Airbus)

## The value

### Conformity documents sharing & auditing

1. Trusted chain of traceability documents (Certificates of Conformity & Airworthiness Release Certificates)
2. Request for visibility access (traceability construction and flown down to next level of the chain)
3. Review and validation of visibility request bottom-up resulting in multi-tiers view

Enables trusted transparency

Approach as a Service

Respects data ownership

Quick Onboarding (SaaS)

Requires common language

Potential for automation and AI support

Next Steps & Call to Action

# Principal Use Cases identified description (1/2)

|                                 |                              |  |
|---------------------------------|------------------------------|--|
| Development & Industrialisation | Technical Workflow           | <b>Exchange Smart Document</b> with structured metadata through product lifecycle - Display accurate document status, optimize real-time data exchange, ensure digital continuity and easy IT integration, and establish a robust exchange channel with a complete digital thread. |
|                                 | MBSE Exchange                | Enable efficient exchange of MBSE models across diverse tools and partners, ensure traceability and IP protection, support collaborative development with clear version control, and define a standardized data exchange format.   |
| Supply Chain Resilience         | Demand & Capacity Management | For specific purposes, some companies decide to <b>share critical stock at decoupling point of the supply chain with alert system</b>  |
|                                 | Non quality management       | Share <b>non-conformity data</b> across relevant partners, collect supplier actions, and collaborate on containment, resolution, liability, costing, and prevention with data analysis capabilities  |
| Traceability & Conformity       | Product Conformity           | Certificate of <b>ARC doc exchange</b> in multitier including <b>workflow visualization</b>  |
|                                 | Export Control               | <b>Central classification management</b> including <b>update process with workflow if regulation changes</b>   |

## Principal Use Cases identified description (2/2)

|                |                          |   |
|----------------|--------------------------|---|
| Sustainability | Product Carbon Footprint | Provide SMEs and the aerospace industry with <b>standardized digital tools to calculate and monitor product carbon footprints</b> (Scopes 1, 2, and 3) across the supply chain. Ensure <b>secure traceability, improve data transparency and quality, and support climate impact reduction</b> through <b>harmonized procedures</b> . |
|                | Circular Economy         | Build a digital ecosystem enabling <b>standardized data frameworks, E2E traceability, and feedback loops to enhance decision-making and reuse of unused components</b> . Empower supply chain autonomy and ensure traceability through the use phase, aligned with aviation's roles and responsibilities.                             |
|                | ESG Reporting (CSRD)     | <b>Sustainability report data-driven.</b>   |
|                | Substance tracking       | <b>Smart document (report) with structured metadata (CO2 substance tracking)</b>  |

# "Which of those use cases have the highest priority for your business?"

| Development & Industrialisation | Supply Chain Resilience      | Traceability & conformity | Sustainability           |
|---------------------------------|------------------------------|---------------------------|--------------------------|
| Technical Workflow              | Demand & Capacity Management | Product Conformity        | Product Carbon Footprint |
| MBSE Exchange                   | Quality Management           | Export Control            | Circular Economy         |
|                                 |                              |                           | ESG Reporting (CSRD)     |
|                                 |                              |                           | Substance tracking       |

## What's Your Top Priorities?

Head over to the Q&A in the Webinar Gmeet and let us know what are the **3 most important** to you with an   you can also **add others uses cases that are more prioritaire** for you with  and

Next Steps & Call to Action

## Call to Action & Next Steps

We are looking for **volunteers to provide feedback on the solutions** (e.g. technical...) and/or **uses cases** developments

### How

Participate in ad-hoc **interviews**

### Why

**Influence** use case standards and solutions to **ensure your needs are well reflected** in the future solution.

Benefits from **being an early user** of a use case  
**No fees** until 2028 for the first 100 suppliers.

**Ready to build the future?**

Share your email address [>> here <<](#)

*By providing your email address, you will also receive the result of this webinar*

# Thank You!
